

PU-soles

Polyurethane soles are lightweight and flexible. Some models have a special tread ensuring the maximum slip resistance. They are also well suited for occupational footwear because of their oil-resistant and anti-static/conductive features. Several models have been tested according to the occupational and safety footwear standards. A glossy paint finish is available if needed for example in formal footwear.

The basic colors available are black, gray, beige and white - please inquire after other options. Our most popular models are listed below. In addition to them we have many other models available. Exclusive models and molds can be designed on request. Please don't hesitate to contact us for more information.

Minimum order quantity 300 pairs / article / color, with special tread 1000 pairs / article / color.
Minimum order quantity / size is 30 pairs.

Art.nr U553

Eg. for occupational footwear, available with a special tread, anatomically shaped, available with a shank

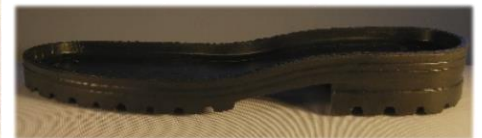

sizes 35-42
weight/pair size 38: 500 gr

Art.nr U441
